HOUSEHOLD SURVEY CHAD

Quotation

Prepared for:

John Simister, visiting lecturer at Birkbeck College,
University of London, UK

___ September 2008 ___

Membre de :

Background

Mr John Simister, visiting lecturer at Birkbeck College, University of London, UK wants to commission a household survey in Chad, in order to know more about how people leave in Chad both in urban and rural areas. The results of the survey will be used to develop Chad.

The present document is CIBLE's fieldwork quotation .

Methodology

Data Collect:

Face to face interviews will be conducted in households selected randomly. The questionnaires will be translated into Arabic and Gambaye.

The locality's sample size depends on its weight on the total population of all selected regions. In a locality, we will interview 20 people for a district of 100 inhabitants. The number of interviews depends on the number of inhabitants.

After choosing a starting point, the interviewer moves on his left side. The first household in which he gets is determined by the date of the day. If even date, the first interview is held in the second household after starting point. If odd day, the first interview takes place in the first household after the starting point.

A gap sample of $1/5$ (after a success, the next interview will be conducted in the fifth household) in urban area and $1/3$ in the rural area will be applied. In case of failure, there is no sampling gap.

Respondents' selection:

The respondent should be selected regarding the following criteria:

- Age: 18-60 years old;
- Sex: both male and female;
- Social classes: ABCDE

Location:

We don't cover the far north because there is mostly desert .Because of insecurity, it is not possible for us to cover eastern part of the country either.

Because the survey should give an idea on how people leave in different parts of the country, we propose five regions:

- Njamena and Chari Baguirmi;
- Logone Occidental;
- Guerra;
- Lac;
- Wadi fira;

In each locality, we will make sure that 60% of the sample will be urban and 40% rural area.

Sample

Regions	Localities	POP	Weight %	sample		
				Urban 60%	Rural 40%	global/region
Njamena and Chari Baguirmi	Ndjamena	1 777 284	51	766	511	1 277
Logone Occidental	Moundou	646 641	19	279	186	465
Guerra	Mongo	434 776	12	187	125	312
Lac	Bol	359 078	10	155	103	258
Wadi fira	Biltine	262 364	8	113	75	188
Total	/	3 480 143	100	1 500	1 000	2 500

Quality control

In order to ensure the consistency and reliability of the results, CIBLE has developed specific quality control tools such as:

- interviewers and supervisors training ;
- Current supervisors firstly worked like interviewers;
- The supervisors have to realize at least:
 - 20% of accompaniment of interviewers on the field ;
 - 30% back-check by supervisors;
 - 100% editing of questionnaires;

Timing

	Duration	Date
Set up and Fieldwork	3 weeks	28 October-18 November
Data processing (editing, coding, data entry)	2 Weeks	25Nov-02Dec
DATA DELIVERY		05 December 2008

COST

- **Total cost of the survey: 7 087 028 CFA F**

(Seven million eighty seven thousand and twenty eight CFA F)

The present cost takes into account the fact that the questionnaire doesn't have open ended questions

- **Terms of payment:**

60% of the cost should be paid prior the beginning of the fieldwork.

RESPONSABILITIES

- John Simister
 - provide final English questionnaire
- CIBLE
 - Fieldwork
 - Data delivery (Excel or SPSS file)
